Exercise 06

The screenshot displays the Grok AI web interface. On the left is a sidebar with navigation options: Search (Ctrl+K), Chat, Voice, Files, Tasks, Projects, and History. The History section is expanded, showing a list of recent interactions including 'AI Agents Python Specialization', 'Restaurant and Event Management', 'Generative AI for University', 'This Week', 'Understanding Foreign Key', and 'Generative AI and Neural Networks'. The main content area is divided into two panels. The left panel shows a document titled 'AI Agents and Agentic AI in Python: Powered by Generative AI Specialization' with a description: 'A description about the course and benefits and job opportunities'. Below this, there's a section for 'AI_Agents_Course_Description.md markdown' with options to 'Edit in files' or 'Show inline', and a note that it contains '25 web pages'. The right panel displays the document's content, which includes a title, a course description, and a structure section. The title is 'AI Agents and Agentic AI in Python: Powered by Generative AI Specialization'. The course description states that the 'AI Agents and Agentic AI in Python: Powered by Generative AI Specialization' is a three-course series offered by Vanderbilt University on Coursera, designed to equip learners with skills to build autonomous AI agents using Python. The structure section lists two courses: 'Course 1: AI Agents and Agentic AI with Python & Generative AI (10 hours)' and 'Course 2: Prompt Engineering for ChatGPT (18 hours)'. The interface also features a top bar with a 'Share' button and a bottom bar with a search bar and a 'Grok 3' model selector.

AI Agents and Agentic AI in Python: Powered by Generative AI Specialization

Course Description

The **AI Agents and Agentic AI in Python: Powered by Generative AI Specialization**, offered by Vanderbilt University on Coursera, is a three-course series designed to equip learners with the skills to build autonomous AI agents using Python. This specialization focuses on creating resilient, intelligent systems that can reason, plan, and act independently to solve real-world problems. It emphasizes foundational principles over fleeting frameworks, ensuring skills remain relevant in the rapidly evolving AI landscape. Taught by Dr. Jules White, the course is suitable for beginners with basic Python skills and experienced developers looking to deepen their understanding of agentic AI.

Structure

- Course 1: AI Agents and Agentic AI with Python & Generative AI (10 hours)**
Learn to build a complete AI agent framework, design tool discovery systems, and create production-ready agents for tasks like file exploration, documentation generation, and coding.
- Course 2: Prompt Engineering for ChatGPT (18 hours)**
Master prompt engineering techniques to work effectively with large language models (LLMs) like ChatGPT, creating complex prompt-based applications for various domains.
